

Vacuum Excavating Services

Brubacher's Vacuum Excavating Services

allow for remote access in hard to reach areas up to 300' away and 15' deep. While the vacmaster is a high performance air vacuum excavation system, it also can be used for hydro excavation, making it effective in all types of soil.

Our Vacuum Services Trucks are:

- SAFE
- EFFICIENT
- PRODUCTIVE
- EFFECTIVE

Common Vacuum Excavation Applications

- Valve Box Cleanout
- Underground Storm Sewer Cleanout
- Locate Existing Utilities
- Sanitary Sewer Maintenance and Repair
- Locate Existing Underground Obstructions
- Digging Under Existing Structures
- Excavate for Fence Post and Signs
- Emergency Excavation Response

What is Vacuum Excavation?

Vacuum excavation is the process of loosening and removing soils with high pressure air and/or water.

Let us show you how we can turn your back-breaking dangerous job into a fast, simple, safe and cost effective process!

What are the Benefits of Vacuum Excavation?

- Lower cost and increased production by locating existing potential obstacles.
- Unlike excavators, shovels and picks: air does not damage utility lines.
- With 600,000 underground utility hits per year, this equipment can help eliminate utility strikes and the personal injury that goes along with them.
- Works well in all weather conditions including frozen ground
- Will not impact the stability of the existing road base
